Gen 6 Enterprise

Nx WitnessTM Enterprise

Welcome to Nx Witness Gen 6 Enterprise, our most advanced release yet. This rollout marks a significant step forward in our mission to redefine video as a tool for actionable intelligence and large-scale, data-driven operations. With Gen 6 Enterprise, we are delivering a fully integrated, scalable video management solution designed to meet the demands of complex enterprise environments.

Contents:

Network Optix

Evolution of Nx Witness

Section 1

Ready For The Next Generation

As Network Optix enters the Gen 6 era, we are embracing bold, strategic changes that align with our company's evolving direction and open new market opportunities.

Our brand refresh is inspired by the core elements that define Nx Witness: the system operator, representing human intelligence overseeing video and data feeds; the individual pixels that compose video, symbolizing the precision and clarity of visual data; and the cameras, which serve as the backbone of the entire surveillance system.

By integrating these elements—operator, pixel, and camera—the new logo encapsulates the comprehensive and interconnected nature of our innovative approach to video surveillance.

Network Optix

1. Evolution of Nx Witness

Generation 6 (Gen 6) is the next iteration of the Nx software lineup. The Gen 6 release splits Nx product offerings into two streams: Professional (perpetual) and Enterprise (subscription).

Nx Witness Enterprise

Gen 6 Enterprise is Network Optix's official launch into a subscription-based (SaaS) offering, designed for large-scale intelligent video and data management. This version includes the feature set included in Gen 6 pro, with exclusive capabilities like a New Organization Layer, Nx Maps, and Nx Connect.

Nx Witness Pro

Gen 6 Pro is the latest iteration of Network Optix's perpetual offering, Nx Witness Pro VMS, designed for efficiency and optimized control in video management. This major release refines system operations and enhances workflows with features like Redesigned User Management, NVIDIA hardware decoding, and Camera Hotspots, making them more efficient, responsive, and user-friendly than ever.

New Features

Section 2

Nx Connect.

The Nx Connect Portal is an intuitive, cloud-based platform designed to give Channel Partners full control over managing their sub-Channel Partners and Organizations. With Nx Connect, partners can efficiently oversee services (formerly licenses) and billing in one centralized system.

Cloud-Based Access

New Organization Tier

management.

Unified Site Organization Manage large-scale deployments by grouping multiple Sites under a single Organization. This structure allows you to scale infinitely while maintaining control over user permissions, system health, and archives across all Sites.

Nx Witness Enterprise introduces a powerful new

Organizational Layer that transforms the way you manage your systems. With this new hierarchical structure, you can now oversee multiple Sites under a Unified Organization, offering better control, scalability, and streamlined

Unified Notifications

Stay informed with notifications from all Sites linked to your cloud account, accessible directly through the Nx desktop client. This ensures you're always up to date on system events across your entire network.

Nx Maps.

Intelligent GIS Mapping Utilize smart maps with eler images, PDFs, and satelliter Streamlined User Interface Experience a user-friendly i simplifies surveillance mana Real-Time Device Oversight Monitor IP devices, access t recorded images, and check

Improved and Redesigned User Management

With the introduction of Gen 6, administrators now have the power to craft permissions for both groups and individual users. This release also introduces the capability for users to belong to multiple groups, providing unparalleled control over user management.

01

User Role Names Updated

1. Owners are renamed to

Administrators

2. Administrators are renamed to

Power Users

02

Enhanced User Rights System

We've strengthened the user rights system, providing more flexibility and control over user permissions.

03

Custom Permissions for Users and Groups

You can now assign unique permissions to individual users or groups for selected cameras, offering precise access control. 04

Flexible Group Membership

Users can belong to multiple permission groups, with nested groups able to inherit permissions from other groups.

Temporary User Access

Alongside your regular users, you can now effortlessly create
users with time-limited access. Admins have full control,
setting expiration times and link usage restrictions. Please
note, this feature can only be used in the local user tab. The link
provided to temporary users gives access to the Nx Desktop
Client and Web Admin.

NVIDIA Hardware Video Decoding

Key Benefits

n[×] Network Optix

2. New Features

- Nx Witness can now leverage the advanced capabilities
- of NVIDIA GPUs to provide video decoding, ensuring your
- security system operates at peak efficiency.

 - Enhanced Performance
 - Lower CPU Usage
 - Smoother Video Playback

Available on Windows and Ubuntu.

Bookmarks in Nx Cloud

Bookmark capture ke system. W bookmark to retrieve anywhere flexibility. _{Coming Soon.}

n^x Network Optix

- Bookmarks offer a simple and efficient way to
- capture key data and insights from your video
- system. With Generation 6, you can now access
- bookmarks directly through Nx Cloud, allowing you
- to retrieve important information anytime,
- anywhere for improved remote responsiveness and

Object Search in Nx Mobile

Nx Mobile now enables advanced object searches directly within the app. Alongside this new feature, users can continue to benefit from the powerful capabilities of live viewing, playback, calendar search, smart motion search, and bookmarks.

Available for Android & iOS

New in Gen 6. Operational Enhancements & Improved User Experience

Improved Protocol

The client-server communication has been upgraded to a more robust protocol, strengthening data protection and ensuring greater security.

Increased Maximum Devices

Gen 6 increases the maximum devices per server from 128 cameras to 256 cameras.

Enhanced LDAP Integration

Streamline user access management with an enhanced LDAP integration, eliminating the need for manual updates.

Industry Standard Security

Network Optix is proud to be ISO 27001 compliant, meeting the highest international standards for information security. This certification highlights our dedication to safeguarding your data.

Gen 6 Improvements

Section 3

Gen 6 Improvements

NEW SUPPORTED OPERATING SYSTEMS:

- MacOS 14.0.
- Raspberry Pi OS 11 (32-bit).
- Raspberry Pi OS 12 on Raspberry Pi 3 and Raspberry Pi 4 (32-bit) without support for native Raspberry cameras.

DEVICE CHANGES:

- Vivotek Added support for new event types: Smart Tracking, Parking Detection, Restricted Zone Detection.
- Vivotek Advanced Smart Tracking now includes zoom variables in Region of Interest settings.
- Vivotek Exclusion Mask function added to Advanced Smart Tracking in the Desktop Client.
- Improved Hanwha Intercom Integration
- Faster Hikvision camera authorization on specific Hikvision cameras.
- Now compatible with Allnet cameras.
- Uniview Analytics Enabled

IMPROVEMENTS:

- Streamlined Calendar Navigation: Our new calendar offers smoother, more efficient browsing through extensive archives and timeframes.
- Enhanced WebRTC Performance: Significant improvements have been made to WebRTC, with detailed updates available in the upcoming API release notes.
- Improved DST Support: Daylight Saving Time (DST) handling has been optimized for better accuracy.
- **JWT Token Support:** Now supports JWT tokens, resolving Cloud DB performance issues and reducing logout incidents.
- Simplified Main Menu: Webpages and Integrations are now clearly separated in the main menu for easier access.
- Advanced Log Management: Desktop Client now features enhanced log configuration and extraction capabilities.
- User Session Tracking: New user sessions are now recorded in the Audit Trail for better monitoring.
- Updated In-Client Browser: The In-Client Browser (Webkit) has been upgraded for a smoother browsing experience.

- **Quick User Selection:** Double-click to quickly select the current user and system in the resource tree.
- **Customizable Web Page Titles:** Webpage titles \bullet can now be hidden within the Desktop Client for a cleaner interface.
- Updated PTZ Control Guide: The PTZ Control Guide in the Desktop Client now includes new functionalities, usage examples, and operational details.
- **Quick Playback Actions:** Added quick action buttons to rewind or fast forward videos by 10 seconds.
- Enhanced Camera Dragging: Fisheye and PTZ cameras can now be dragged easily by their title and header.
- Faster Analytics Display: Analytic markers (yellow) now appear on the Timeline much quicker.
- **Resilient Cloud Layouts:** Cloud Shared Layouts • are now more reliable, even during network congestion or timeouts.
- Redesigned Pause Overlay: The pause overlay • has been redesigned to allow you to view video content even when paused.
